

Load capacity  $F_1$   
in N

Load capacity  $F_2$   
in N

An extensive series of tests were carried out with the cabinet U-handles / tubular handles listed below.

The handles were slowly loaded and relieved at room temperature with incrementally increasing force. After load relieve, a deformation irrelevant in terms of function and appearance remained at the listed values for  $F_1$  and  $F_2$  respectively. The breaking loads were in most cases multiples above the specified value.

Note:

The details given on load rating are non-binding guide values without any liability. In general, they do not constitute a warranty of quality.

The user must determine from case to case if a product is suitable for the envisaged use. Ambient factors and ageing may influence the specified values.
